

F805AT-CK

F805AT APPLICATION SERIES
CHECKER SCALE INDICATOR

This is a weighing indicator developed for checker scales. It is equipped with "Dynamic Mode" suitable for systems with inconsistent belt speed or its objects for weighing have irregular dimensions. Apart from that, it also comes with the "Static Mode" that is convenient for systems in which the weights of objects for weighing are dispersed.

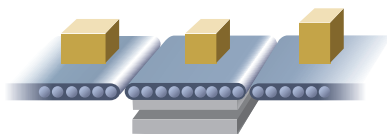

With this weighing indicator, a weighing system that suits the application can be easily constructed.

Selectable measuring mode to suit application

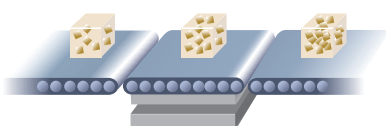

Dynamic Mode

Suitable when the belt speed is inconsistent or the dimensions of the objects for weighing are irregular

Static Mode

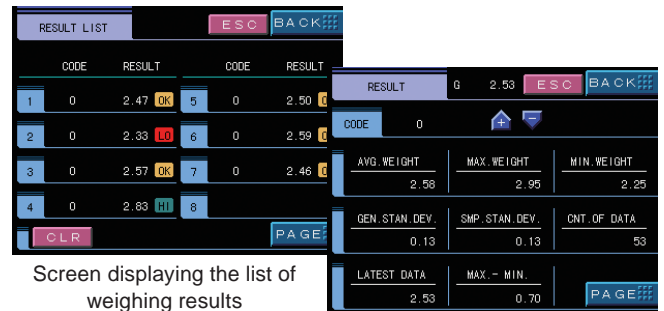

Suitable when the weights of objects for weighing are dispersed

Please specify requirement for CE marking certified product when making your order.

Weighing results display function

Apart from its capability to display weighing results in real-time, it can also display various calculations through its tabulating function.

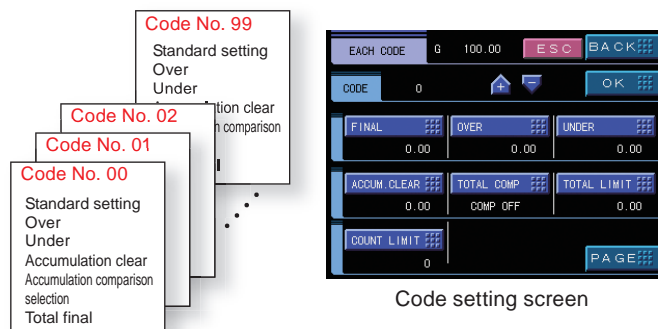

Screen displaying the list of weighing results

Screen displaying the calculations

Code number registering function

By recording every setting value for each of the 100 types of code, the settings can be instantly changed by just calling out the concerned code number.
